Himanshu Chauhan

AI Engineer | LLMs, RAG & Agents

himanshu.chauhan07@icloud.com | ansh.life | github.com/himanshu-dev-codes | linkedin.com/in/devhimanshuhc

SUMMARY

AI engineer with 1.5+ years shipping production LLM features: retrieval-augmented generation over clinical records, tool-calling agents for equity workflows, and an agentic mobile browser. Python, FastAPI, LangChain and the Vercel AI SDK. Builds with **Claude Code**. Based in Dehradun, India.

EXPERIENCE

Heizen | San Francisco, CA (Remote) — Aug 2025 - Oct 2026

*Backed by **Titan Capital ($500K)**; featured on **Shark Tank India** and **Forbes Remote***

Software Development Engineer — Jun 2026 - Oct 2026

- **Evra (AI healthcare, 3k+ users):** Cut clinical data entry **40%** by shipping LLM summarization and **RAG** over patient records. MongoDB vector search and LangChain on **FastAPI**, with Fernet-encrypted clinical fields, role-based clinician auth and a React Native (Expo) app.
- **Heizen Studio (open-source AI dev tools, 5K+ users):** Owned system architecture, API contracts and delivery end to end.
- **Medurun (ambulance dispatch, pre-launch):** Architected real-time dispatch (**NestJS**, Redis geospatial search, **Socket.IO**, atomic **Lua**, BullMQ) and shipped the React Native rider and driver apps plus Next.js dashboards.

Associate Software Development Engineer — Feb 2026 - May 2026

- **DeepMechanix:** Cut ASME pressure-vessel design cycles from **weeks to hours** by automating **PV Elite** against ASME code, including the APIs, job orchestration and validation pipeline.

Software Development Engineer Intern — Aug 2025 - Jan 2026

- **EquityNav:** Built AI insight agents for vesting, exercises and liquidity on the **Vercel AI SDK** (OpenAI and Gemini), with tool calling, SQL execution, structured outputs and guardrails.
- **EquityNav:** Unified Carta portfolios and an equity-tax engine into projection, scenario and risk dashboards. Automated sync and alerts with NestJS Scheduler, Docker and GitHub Actions.

United Protocol | Auckland, NZ (Remote) — May 2023 - Jul 2025

Full Stack Developer

- Built an AI-agentic mobile browser in React Native (**Meta LLaMA, LangChain, Groq**) that runs multi-step web tasks, and shipped **Hume AI** + Twilio speech-to-speech voice agents.
- Shipped tamper-proof encrypted history on IPFS + BNB Smart Chain (Solidity), plus web and desktop apps in React, Next.js, Electron and Tauri.

WhatBytes | Bangalore, India (Remote) — Jun 2024 - Oct 2024

Frontend Developer

- Improved rendering on a Svelte + Next.js app serving **70,000–100,000+ weekly users**, and built analytics dashboards (Google Analytics, Facebook Insights).

PROJECTS

- **Retro** (retro.ansh.life, source): Actor-based multi-agent research system. Agents run as isolated BullMQ workers and write cited reports. A crashed step resumes effectively once, without a duplicate report; failed jobs go to a dead-letter queue and replay.
- **Quotient** (quotient-dun.vercel.app): Writing workspace with fast capture and notebooks (Next.js, Prisma, Neon).
- **DataSays**: Plain-English questions return SQL and a chart. LLM analysis layer for querying and visualizing datasets.

SKILLS

AI: LLMs, RAG, vector search, LangChain, tool calling, structured outputs, guardrails, OpenAI, Gemini, Vercel AI SDK, Groq, Claude Code, LLM evals (LLM-as-judge)

Languages: TypeScript, JavaScript, Python, SQL, Lua, Solidity

Backend: FastAPI, NestJS, Node.js, MongoDB, PostgreSQL, Prisma, Redis, BullMQ, Docker, AWS (S3, ECS, ECR, ElastiCache, ALB), GitHub Actions, WebSockets, Playwright, pytest

Mobile & Frontend: React Native (Expo), React, Next.js, TailwindCSS, TanStack Query
